Carlisle Interconnect Technologies UTiFLEX cable assemblies have been evaluated for Insulation Resistance per MIL-STD-202F, Method 302, Test Condition B.

In keeping with the military standard, 500 volts +/- 10% were injected into the test sample for a minimum of two (2) minutes. The insulation resistance was read and recorded.

UTiFLEX assemblies exhibit insulation resistance greater than $100 \times 10^5 \, \text{M}_\Omega/\text{foot}$.
